AND INNOVATION**

APPROVAL SHEET

This research entitled **“IMPACT OF STUDY HABITS IN ACADEMIC PERFORMANCE OF BACHELOR OF SCIENCE IN OFFICE ADMINISTRATION STUDENTS IN PAMANTASAN NG LUNGSOD NG SAN PABLO”** prepared and submitted by **ELYZA ROSE R. RAMOS, JOHN LUIS E. SAMALA, CYELL KIEN A. UMALI, A.Y 2023-2024**, in the partial fulfillment of the requirements for the Degree of Bachelor of Science in Office Administration has been recommended for acceptance and approval for Final Oral Defense.

Lourdilyn P. Glorioso, EdD
Research Adviser

PANEL OF EXAMINERS

Approved by the committee on Oral Defense Examination on June 24, 2024 with a grade of ____.

Abigael Amor Torres LPT, MBA
Panelist 1

Janina Agnes
Panelist 2

Justine Albert Ticzon
Panelist 3

Accepted and approval in partial fulfillment of the requirements for the degree of Bachelor of Science in Office Administration.

Layzon G. Briones, MPA
Dean

PROF. KRISTIN ANNE C. CORCEGA, MACA
Vice President for Research and Innovation

ACKNOWLEDGEMENT

First and foremost, we give glory to our Almighty God, the Creator of all things, for providing us with strength, good health, and wisdom to complete this research.

To **Mrs. Lourdilyn P. Glorioso**, our ever-helpful Research Adviser, for her ceaseless effort, insightful suggestions, and genuine concern, which have been of tremendous assistance to us. Her sage advice is what we will remember most. We are appreciative and proud, knowing that she will continue to succeed. She has demonstrated her ability to guide us effectively on numerous occasions, especially with her pearls of wisdom that guided this investigation throughout its entirety.

To **Dean Layzon G. Briones**, for allowing us to conduct this research, we are deeply grateful for your support and encouragement.

To the **BS-OFAD students** of Pamantasan ng Lungsod ng San Pablo, for their cooperation and fair evaluation of our questionnaire, we are truly grateful.

To our **fellow group members**, whose dedication and hard work made this research successful, we extend our sincere thanks.

To our **friends and batch mates**, who have never failed to encourage and support us in all of our endeavors, we extend our heartfelt thanks.

And to our passionate, understanding, and loving **parents**, whose financial assistance, spiritual and moral support, and guidance profoundly inspired us to conduct this study. We also extend our sincerest gratitude to our **siblings**, who have always believed in us.

Finally, to the **researchers**, congratulations on your dedication and perseverance. Your hard work has paid off, and this successful completion is a testament to your commitment and teamwork. May this achievement be a stepping stone to even greater accomplishments in your future endeavors.

ABSTRACT

This quantitative study explores the impact of study habits in academic performance of Bachelor of Science in Office Administration (BSOA) students at Pamantasan ng Lungsod ng San Pablo. The research investigates how Study habits, Time management, Learning strategies, Study environment, student learning outcomes. Utilizing a Google Form survey questionnaire, data were collected from the respondents to assess their experiences and perceptions of study habits's role in their education. The study aims to identify correlations between the use of study habits and improvements in academic performance. The findings will provide insights into the impact of study habits in higher education, offering recommendations for enhancing student learning experiences and outcomes.

Chapter 1

THE PROBLEM AND ITS BACKGROUND

Introduction

Academic achievement is an important criterion for students, and achieving in this area can open the road for further chances. While many factors influence a student's success, research consistently demonstrates the importance of study habits. These habits include the routines, tactics, and approaches that students use to learn and remember information.

A student's study habits are a major factor in their academic success. Good study habits are positively correlated with excellent academic achievement, Good study habits help students memorize material better, use their time wisely, and feel more confident when they take tests. If you want to learn more about particular study habits that can affect your academic performance.

Students adopt various study habits that shape their learning journey. These habits, ranging from time management techniques to learning strategies, significantly influence academic performance. one of the significant factors in assessing academic performance is through their study habits and attitudes. Arieta, Gementiza & Saco (2017) highlighted the critical role of study habits in the students' lives. They concluded that the success or failure of each student depends upon their study habits. Moreover, their success depends on their ability, intelligence, and effort.

The influence of the students' good study habits in doing their homework, active participation in class, managing their time, being focused, and working hard have shown a significant positive correlation on their academic performance suggested that students cannot perform and improve their academic performance without developing study habits. effective study habits encompass a broad spectrum of behaviors, including time management, active engagement with course material, utilization of resources, and maintaining a conducive learning environment.

Background of the Study

The purpose of this study is to investigate the impact of study habits on their academic performance. It seeks to investigate the exact ways in which successful study habits improve a student's capacity to absorb concepts, retain knowledge, and, ultimately, attain academic objectives. The study will look at alternative study strategies, time management techniques, and environmental aspects that contribute to effective learning.

Study habits are important to students' daily study routines. These strategies can help students gain interest in their studies without feeling forced. Effective study habits are crucial for academic success. Study habits refer to students' routines and activities during the learning process. Various study habits have developed, such as time management, goal planning, study environment selection, note-taking strategies, idea selection, and organizational skills.

A variety of factors influence the academic performance of learners, the most important of which are their study habits. Study habits encompass different kinds of behaviors, strategies, and procedures used by students to help them learn, comprehend, retain, and apply course material. These behaviors are critical to college students' academic success because they directly impact their capacity to excel in coursework, get good marks, and meet their academic goals.

Students who practiced regular study habits, such as daily attendance, continual content review, active engagement in class discussions, and the utilization of resources including textbooks, lecture notes, and additional materials, outperformed those who did not. Students with poor study habits, such as procrastination, cramming, passive learning techniques, and improper time management, typically fail to meet academic requirements and may obtain worse grades, increased stress, or academic probation. Problems commonly experienced by BS Office Administration students at Pamantasan ng Lungsod ng San Pablo.

Research Paradigm

This study will be conducted to examine the relationship between technology and the students' learning outcomes of Pamantasan ng Lungsod ng San Pablo. This subject of the study were the students of college's in PLSP that currently enrolled in the School Year 2023-2024. To demonstrate the interaction of the two variables, the study will use the Independent and Dependent variable model.

Independent Variables

I. Student Profile

- Age:
- Gender:
- Year level:
- Section:

II. Study habits

- Time management
- Learning strategies
- Study environment

Dependent Variables

III. Academic Performance

- Grades

Figure 1. The figure shows the relationships of the independent variables and the dependent variables.

Research Questions

1. What is the profile of the respondents in terms of the following:
 - 1.1. age;
 - 1.2. gender;
 - 1.3. year level;
 - 1.4 section;
2. How do the students perceive the impact of the study habits in terms of the following:
 - 2.1. study environment;
 - 2.2. learning strategies;
 - 2.3. time management;
3. What is the level of respondent's academic performance satisfaction in terms of the following:

3.1. Grades/ GWA

3.2. Standardized Test Scores

4. Does study habits have significant association with the academic performance of BSOA students at PLSP?

Hypothesis

Is there a significant relationship between the impact of study habits in academic performance of BSOA Students in Pamantasan ng Lungsod ng San Pablo?

Significance of the Study

This study on the impact of study habits in Academic Performance of BSOA students at PLSP holds significance for several reasons, one of them is bridging the knowledge gap, this research addresses a critical gap in understanding how study habits strategies impact the BSOA students' academic performance like learning strategies, time management and study environment as study habits strategies. Second, informing the students about the impact of using different habits. this study can provide valuable insights for educators within the BSOA program at PLSP. The findings can guide the development and implementation of a more effective learning environment that promotes students' engagement and academic achievement.

Scope and Limitation of the Study

This research investigates the impact of study habits on the academic performance of the BSOA students at PLSP. The focus will be on study environment, time management, and learning strategies, examining their effects on students' grades. While study may not be generalizable to the entire BSOA students at PLSP and potential limitations in sample size and data collection methods, it offers valuable insights for the program.

This study recognizes that it may not catch long-term effects or complete control for outside factors affecting academic performance, yet its discoveries

can in any case help the academic practices inside PLSP and possibly move further research on impact of study habits for BSOA programs.

Definition of Terms

In this study the following terms used were operationally defined for clarity:

Academic Performance. The process of evaluating students' performance in a range of academic courses.

Age. It refers to the respondents' length of time of his/her life in which the study is being delivered.

Attendance. This refers to someone showing up for a class, or any situation where physical or virtual presence is expected.

Gender. It refers to the attributes of the respondents that given society considers for being men and women.

Grades. A teachers judgement on a student understanding of a subject of their mastery of specific skill.

Independent learning skills. This are the abilities students possess to manage their learning effectively without constant guidance.

Learning Styles. It refers to individual preferences in how information is received and process they can influence how student approach studying.

Respondents Profile. The analysis and interpretation of the traits and actions of survey participants.

Time Management. the ability to use one's time effectively or productively, especially at work and to the educations also.

Study environment. refers to the diverse physical locations, contexts, and cultures in which students learn.

Year. In terms of education, it refers to the academic year or grade level that a student is currently enrolled in.

Chapter 2

REVIEW OF RELATED LITERATURE AND STUDIES

This chapter presents the review of available literature and studies which are taken from the books, journals, thesis, dissertations, newspapers, magazines and internet. Related literature and studies has helped the researcher to have a better understanding and wider perspective of this investigation.

Study Habits

According to Arieta, Gementiza, and Saco (2017) highlighted that study habits play significant role in students life. The success or failure of each student depends on their study habits. The study also says that study is an art and requires practice and effort. The success of catch student depends on significant relationship between study habits and academic performance of the students. This study indicates that study habits identify a person how much he would be able to learn. learn. Moreover, Mor the result indicated a significant relationship between study habits and the students academic performance.

According to Wang et al. (2014) defined study habits as well-planned and deliberate patterns of study that significantly influence the academic achievements of students. This suggests that study habits are crucial for determining the success of students in their academic pursuits. Additionally, it is important to note that both reading and academic achievements are interrelated and dependent on each other, emphasizing the significance of study habits in academic performance.

According to Magulod (2019) emphasized the positive association between study habits and academic success, as well as the significant relationship between study habits and the academic performance of students. These findings further support the notion that cultivating effective study habits is essentials.

According to Atsuwe and Moses (2017) reported that study habits had a predictive effect on academic performance. Better study habits lead to higher

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

academic performance. Completion of homework and assignments at proper time, proper time allocation, reading and note-taking and teacher consultation significantly influenced academic performance of university students.

According to Capuno, Reylan et al (2019). study habits are a well-planned and deliberate pattern of study which has attained a form of Consistency on the part or the students toward understanding academic subjects and passing at examination. Study habits determine the academic achievement of students to a great extent. Both study habits and academic achievement are Interrelated and dependent on each other. There are students who come from different environment, localities etc. and have different levels of academic achievement i.e., high and low. They also differ in the pattern of study habits. Some students have better study habits while the others have poor. Better the study habits better is the academic achievement.

According to Rabia et al. (2017), in their study entitled “A Study on Study Habits and Academic Performance of Students,” results showed that there is a significant relationship between study habits and academic performance of the students. This study indicates that study habits identify a person how much he would be able to learn. Moreover, the result indicated a significant relationship between study habits and the students’ academic performance.

According to Au, So, and Lee research (2017), it was reported that the study initiative had an insignificant positive effect on student results. The research concluded that previous awareness steadily raises its impact on success as a student advances. They concluded that prior experience alone correctly predicts student success, not student initiative. While it was discussed in the study, developing healthy study habits would help students in their research years

According to Tus (2020) highlighted that students are still improving their learning attitudes and study behaviors, showing mild teacher acceptance, welcoming education, resisting hesitation, and working methods. These can be due to their families’ knowledge, the outstanding curriculum and procedures the college gave them.

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

According to Looyeh, Fazelpour, Masoule, Chehrzad, and Leili (2017) have shown a substantial association between students' research patterns and academic success. Determining the student's study habits and the relationship between their study habits and academic success can boost their academic achievement and learning habits.

According to Ebele and Olofu (2017) on the impact of study habits on the academic performance of the school children, the authors found that study habits and academic performance do have a substantial relationship, thereby giving an insight into how teachers and student guidance counsellors can help students to develop good study habits in order to enhance their academic performance.

According to Odiri (2015) opined that study habits play a significant role in determining the quality of education and achievement of students in mathematics since students cannot grasp all the learning they need on the subject from their teachers inside the class. It is a partnership between the classroom and outside the classroom learning, which make up students' study habits.

According to Sakirudeen and Sanni (2017) found that study habits like note taking, usage of library, study time allocation influenced the students' academic performance. They further recommended that group guidance should be organized in schools initiated by professional counselors in order to establish awareness on the practical study habits and the provision of a functional library in secondary schools, which could lead to a better performance of the students

Time Management

According to Sayari, Jalagat & Dalluay (2014). time Management is, by all means, essential in all aspects of our lives, whether it may be business, organizations, or education. On educational matters, the presence of time is very precious to students, teachers, heads, and the whole campus. The researchers studied if there was a significant relationship between time management and the students' academic performance. The study's findings showed that time management significantly correlates to students' academic

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

performance. Furthermore, other factors, such procrastination and socialization, have as no significant relationship with the students' academic performance.

According to Alsalem, W., Alamodi, L., Hazazi, A., Shibah, A., Jabri, S., & Albosrour, Z. (2017). time management plays a vital role in improving student's academic performance. Every student should have time management ability which includes setting goals and priorities, using time management mechanism. The basic problems or Constraints related to time management are similar, spending hours on social networking sites, no proper schedule, organization, guidance, targets, missions, Objectives or vision and social engagement. College students may become overwhelmed with feelings that there is not enough time to complete all their work adequately. It is even more crucial for medical students who have one of the most time-consuming majors. This will serve as a guide for students to effectively manage their time and study by full capacity. Time management is a group of practices, skills, tools, and systems that work together to help improving the quality of life Worldwide, students that practiced both planning and positive time attitudes found that they had much more time to complete their tasks because they Control their time spent. It was also found that students who reported using goal-oriented time management had a higher overall GPA.

According to Shazia Nasrullah_PhD, Muhammad Saqib Khan_PhD, Peshawar, Dera Ismail Khan, (2015) time management plays a vital role in improving student's academic performance and achievements. Each and every student should have time management ability which includes setting goals & priorities, using time management mechanism and being organized in using time. Here time management is only possible through self-motivation; performance, ability and motivation.

According to Krumrei-Mancuso, Newton, Kim, and Wilcox (2014) found that effective time management is associated with greater academic performance and lower levels of anxiety in students. Reported that time management behaviors positively impact undergraduate engineering students'

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

performance. These findings highlight the importance of time management skills in achieving academic success and reducing stress levels among students.

According to MacCann, Jiang, Brown, Double, Bucich, and Minbashian (2019) conducted a meta-analysis and found that emotional intelligence predicts academic performance. As effective time management often requires self-regulation and the ability to prioritize tasks, it is reasonable to infer that individuals with higher emotional intelligence may be better equipped to manage their time effectively, leading to improved academic performance.

According to Collie, Holliman, and Martin (2017). found that adaptability, engagement, and academic achievement are interconnected, suggesting that effective time management can contribute to increased adaptability and engagement, ultimately leading to improved academic outcomes. furthermore, the relationship between time management and academic performance can also be influenced by emotional intelligence.

According to Nieuwoudt, & Brickhill, (2017). the concept of handling everyday jobs for longer period of time and keeping up with the objectives set for significant dates is called the competence in long range planning. Whereas, planning in the short run for the day to a day activity or planning for tasks within a day or week is short-range planning. For students to better manage their curriculum and achieve learning objectives, these time management behaviors or skills are argued to improve the positive academic output.

According to Ahmad & Ch,(2017). thereby, it is more complex for managing time and gaining high scores in distance education. Web-based students explore and learn online that just integrates incomplete data and the rest is their business for thinking about and examine further. It is an art for managing time and every learner must command and familiar on this skill for the sake of betterment.

According to Ganguly, Kulkarni, & Gupta, (2017). However, those studies are old and suggested effect in mature female students only. Therefore, a longitudinal study is required to observe the relationship between time

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

management behavior and academic achievement for a definite relationship. Among the high GPA holders, majority of them agreed to make a diary, to-do list or put important dates on the calendar. It might be due to the established relationship between maintaining a task list with effective time management.

Learning strategies

According to Barman, Aziz and Yusoff (2014) also studied the learning style awareness and academic performance of students concluded that students 'awareness of their strengths such as learning style and how to utilize their strengths may improve their academic performance. Another variable being investigated is the study habits and skills of students enrolled in applied science courses. The literature further suggests that study habits are a predictive factor of academic performance.

According to A.S Donker et al (2014) learning strategies are deployed at the start of a learning episode and include sub processes such as goal setting and allocating resources. Examples of these strategies are making a plan, deciding upon the amount of time to spend on an activity, and choosing what to do first. Monitoring strategies are used for checking one's comprehension. These strategies can be considered as continuous assessments of one's learning and/or strategy use.

According to Amandeep and Pathania (2015) defined study habit as a determined purposeful behavioral pattern geared towards previewing, questioning, leading and reciting to master an assignment. Study habits are the pattern of behavior that students should adopt in the pursuit of their studies. The magnitude to which the student is involved in everyday actions is seen as appropriate studying exercises (e.g., reviewing materials and frequency of study sessions) or happening in an atmosphere favorable to study.

According to Kanadlı (2017) examined the effect of self-regulated learning strategies on academic achievement of students, finding a large (0.859) overall effect size value. , the overall effect sizes were found out to be 0.61 for primary schools and 0.54 for secondary schools, revealing moderate effect size values. When all the meta-analytic reviews in the scope were taken

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

into consideration, it was concluded that the studies, examining strategy teaching.

According to Kizilcec & Halawa, (2015); Zheng, Rosson, Shih, & Carroll, (2015). In face-to-face education, time is usually organized around in-class sessions and learners follow a fixed schedule. In contrast, distance learners decide for themselves when and how they engage with the course content, a process that is better known as self-regulated learning.

According to Zhou, Y., & Wang, J. (2019). learning strategies on students' academic performance in distance learning, using self-regulated learning as the underpinning theory. The relationship was analyzed using structural equation modeling, and the results indicated that self-regulation strategies and goal orientation were positively related to academic achievement. We also found a significant and positive indirect relationship of mastery goal orientation and academic performance through self-regulated learning strategies.

According to Chen and Wong (2015) found that mastery goals and performance-approach goals were positively associated with college students' grade point average (GPA), whereas performance-avoidance goals were negatively associated with GPA. However, both performance-approach and performance-avoidance goals were positively associated with average scores in high school, whereas mastery goals showed no association with high school performance.

According to Lin et al. (2017) found that goal orientation does not predict students' performance in different subject areas; however, this relationship is not straightforward. Goal orientation may affect academic performance through learning strategies and other mediating found that self regulated learning strategies are inadequate as a means of ensuring academic success.

According to Zimmerman. (2015). that is to say, the motivation factor is regarded as a prerequisite for self-regulated learning, and highly motivated learners use strategies more proactively to adjust their study for many subjects,

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

such as reading, law, and psychology, learning strategies play an intermediary role in the relationship between motivation and learning performance.

Huang, Van Yperen et al., (2015), the results were positive, especially when test performance was included as a result measure. We found that a mastery-avoidance goal orientation is positively correlated with students' adoption of effort self-regulation strategies and with academic achievement. Adult learners in the distance learning environment whose goal orientation is mastery avoidance can get good grades. This is a result we found interesting because individuals with a high level of mastery avoidance work hard to avoid regression and to perform better than they have in the past. Although these students did not pursue excellence, they did not give up learning.

According to Shehzad, Razzaq, Dahri, & Shah, (2019). research on learning strategies has shown that students may adopt more than one learning strategy since the different academic tasks and their nature require different processing strategies, which range from simple to more complex strategies. Some studies established that the learning strategies could be a good predictor of academic achievement.

According to Tan (2019) found that students rarely used surface or strategic learning strategies, while they frequently used deep learning strategies, but at a moderate level, thus exhibiting less interest in reading and solving word and numeric problems.

According to Rosario et al. (2015) who stated that students have to be self-regulated to control their learning and effectively implement learning strategies. Therefore, students must acquire three types of knowledge: declarative, procedural and conditional knowledge. Declarative knowledge includes information about various learning strategies. Procedural knowledge includes knowing the appropriate way to apply the different learning strategies. Finally, conditional knowledge identifies the proper context to implement a specific learning strategy.

According to Valle et al., (2016). Time management has also been defined as a form of self-management with a clear emphasis on time in

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

understanding what activities to do; how to do them more efficiently; in what time it should be done and when is the correct time to the particular activity

According to Buchori, Setyosari, Dasna, Degeng and Sa'dijah (2017) established that instructors' strategies and techniques determine students' roles, activities and achievement in the learning process and likewise foster students' responsibility for their learning. Other studies investigated learning strategies which can help students acquire information and take an active role in the learning process.

Study Environment

According to Khritish Swargiary, Kavita Roy (2023). the study environment emerges as a focal point of significance, with its potential to shape students' concentration, learning capabilities, and overall scholastic achievements. Recognizing the multifaceted dynamics at play within the study environment, this research directs its attention to a specific dimension the impact of Noise levels on students' academic performance.

According to Okoye, Okoye, Okoh, Ezeji, Omankhanlen & Onor, (2021). apart from these factors, the learning environment such as the physical, social, and psychological learning environments are crucial factors that could affect students' academic performance. This is given the fact that when the school environment is conducive, enriching and properly structured; a touch of motivation can spur students into developing good study strategies that could lead to their academic success.

According to Arnold et al. (2020) conducted a study on the long-term outcomes of ADHD and its impact on academic achievement and performance, revealing that ADHD adversely affects long-term academic outcomes. Treatment was found to lead to greater improvement in achievement test outcomes compared to academic performance. This finding emphasizes the need for further research to explore effective interventions and support systems for students with ADHD to improve their academic performance.

According to Yokoyama (2019) highlighted the association between a positively perceived learning environment and better academic performance,

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

emphasizing the significance of meaningful learning environments and student interactions in supporting academic success. This indicates the need for further research to identify specific elements of the learning environment that contribute to positive student outcomes.

According to Chiu and Cheng (2017) explored the effects of active learning classrooms on student learning and academic performance, identifying the role of task self-efficacy and learning strategies in influencing performance. These findings underscore the importance of promoting active learning environments that enhance students' confidence and learning strategies to improve academic performance. future research directions may include investigating the role of mentorship, technological innovations, and inclusive practices in creating conducive study environments that facilitate student success.

According to Ifenthaler and Yau (2020) identified significant impediments to pursuing basic investigation among surgeons, including pressure to be clinically productive, excessive administrative responsibilities, and difficulty in obtaining extramural funding. Such challenges highlight the importance of creating supportive study environments that enable individuals to balance clinical and academic responsibilities effectively

According to Sarah, A., & Mark., V. (2020). this study environment's literature review typically explores factors like lighting, noise levels, layout, temperature, and ergonomics. It delves into how these factors impact focus, productivity, and overall well-being of individuals studying or working in that environment. Additionally, it may cover studies on the influence of technology and personal preferences on the effectiveness of study environments.

According to Chiu and Cheng (2017) explored the effects of active learning classrooms on student learning and academic performance, identifying the role of task self-efficacy and learning strategies in influencing performance. These findings underscore the importance of promoting active learning environments that enhance students' confidence and learning strategies to improve academic performance. Future research directions may include

investigating the role of mentorship, technological innovations, and inclusive practices in creating conducive study environments that facilitate student success.

Academic Performance

According to Arieta, Gementiza, and Saco (2017) highlighted that study habits play a significant role in students' life. The success or failure of each student depends on their study habits. The study also says that study is an art and requires practice and effort. The success of each student depends on the ability, intelligence, and action of the students. Thus, many effective study habits can help a student to improve. good study habits like doing homework, actively participating in class, managing time, staying focused, and working hard showed a significant positive correlation on their academic performance. Further, students need to develop study habits because these are study strategies that are applied in learning. Without developing study habits, students cannot perform and improve their academic performance

According to Rafiq Ahmad Lone (2021) the various behavioral patterns adopted by the students to prepare for learning academic material or simply qualifying various tests. These are the various approaches, techniques and strategies applied by a person to learn, generally with a view to achieve success. The better the study habits the best will be the grades in the examinations. Study habits are thus the consistent behavioral patterns, routines, styles, modes, manners, techniques and strategies employed by a person to learn or to comprehend the study material in order to qualify the examinations or attain the predetermined academic goal(s).

According to (Rabia, Mubarak, Tallat, Nasir, 2017) study habits are at the core of academic success. It is an action like reading, taking notes, conducting study groups that students perform frequently, and regularly accomplishing the learning goals. It can be defined as effective or counterproductive based on whether it serves the students well. Thus, study habits are purchasing out a devoted and un-interrupted time to apply oneself to the world of learning

PAMANTASAN NG LUNGSOD NG SAN PABLO

Brgy San Jose San Pablo City

OFFICE OF THE VICE PRESIDENT FOR RESEARCH AND INNOVATION

According to Mayanchi et al. (2019) reported a significant and positive correlation between good study habits and academic performance. Self-concept had a significant effect on study habits as well as on academic achievement. The student who had better study habits had higher academic achievement than who had poor study habits. Yap (2019) found that study habits significantly correlated with academic performance. Better study habits lead to higher academic performance. No significant difference was found between students on study habits and academic performance. The investigator concluded that teachers had a significant role in the development of better study habits and academic performance among students.

Chapter 3

RESEARCH METHODOLOGY

This chapter illustrates the research methodology that includes the research design, subject/responses of the study, determination of the sampling technique, research instrument, and research procedure. It provides the readers with perspective on how this study was made and how conclusions were derived.

Research Design

This study was designed as a descriptive survey. This would enable the students to effectively assess the impact of study habits in academic performance.

The descriptive research design is defined as a research methods that describes the of the population that is being studied. As it was used where data was collected from the respondents at one point in time. This design always focuses more on what of the research subject rather than the why of the research subject. The data for this survey was further collected where the questionnaire is its main tool. It stated that descriptive survey designs are used in preliminary and exploratory studies to allow researchers to gather, summarize, present, and interpret information appropriately. A survey in form of standardized questions in a questionnaire was established to collect students' views and experience.

Respondents of the Study

The Pamantasan ng Lungsod ng San Pablo was chosen as the locale of the study. It includes the BSOA students that consist of four sections including, BSOA 1F, OA2A, OA3C, OA 4B with a total of 161 enroll students but only 100 were the respondents. The students of the said sections are the subjects of this research study.

Determination of Sampling Technique

In this study, Determination of Sampling Technique The respondents for this study was BSOA students at Pamantasan ng Lungsod ng San Pablo. Sampling is the act or technique of choosing an appropriate sample, or a representative portion of a population, in order to ascertain parameters or characteristics of the entire population. Stated differently, sampling refers to the process of choosing a subset of the population that will precisely reflect the characteristics of the target population as a whole.

The BSOA students in Pamantasan ng lungsod ng San Pablo were the respondents of the study with the total number of 100 as presented in Table 1.

Table 1. Distribution of the Respondents

BSOA Student of PLSP	Respondents of the Study	
	Population	Sample
BSOA 1F	44	25
BSOA 2A	41	25
BSOA 3C	38	25
BSOA 4B	38	25
TOTAL;	161	100

Research Instrument

To measure the impact of study habits on academic performance of Bachelor of Science in Office Administration students at Pamantasan ng Lungsod ng San Pablo, a set of questionnaires were formulated by the researcher. The respondents of the study were the students of BSOA 1F, 2A, 3C and 4B in Pamantasan ng Lungsod ng San Pablo. Prior to the validation of the questionnaires, it was presented by the researcher. After the approval of students, the instrument was validated

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

The questionnaire was divided into three parts.

Part I included the profile of the respondents, such as age, gender, year and section

Part II of the survey were the use of study habits, learning strategies, time management, study environment; developing students' achievements; The items in the questionnaire were coded on a 5-point rating scale as:

Scales		Description	Interpretation
5	–	Outstanding	(91-100% of the study habits used by the BSOA students)
4	–	Very Satisfactory	(81-90% of the study habits used by the BSOA students)
3	–	Satisfactory	(71-80% of the study habits used by the BSOA students)
2	–	Unsatisfactory	(61-70% of the study habits used by the BSOA students)
1	–	Poor	(60 of the study habits used by the BSOA students)

Part III of the questionnaires referred to respondents' perception on the academic performance satisfaction in terms of the Grades/ GWA and Standardized Test Scores. It used the 5-point rating scale as:

Scales		Description	Interpretation
5	–	Strongly Satisfied	(91-100% of the conditions are felt)
4	–	Satisfied	(81-90% of the conditions are felt)
3	–	Moderately Satisfied	(71-80% of the conditions are felt)
2	–	Dissatisfied	(61-70% of the conditions are felt)
1	–	Strongly Dissatisfied	(60 and below of the conditions are felt)

Statistical Treatment

To determine the frequency and percentage, descriptive statistics were applied for the profile of the respondents such as age, gender, section, year level.

To measure the respondents perception on the impact of study habits in academic performance, weighted mean and standard deviation were used.

To determine the relationship between the variables descriptive statistics were employed to estimate the significant effect among the variables.

CHAPTER 4

PRESENTATION, ANALYSIS, AND INTERPRETATION OF DATA

The key focus of this chapter is to provide a detailed account of data analysis and interpretation of data obtained from the students. This chapter presents the data generated from the survey database. By means of these, the researcher was able to compare and analyze the views of the respondents according to the study sites, and also with research findings from the review of literature.

Part I. PROFILE OF THE RESPONDENTS

The profile of the respondents consists of their age, gender, and year level.

Age

It is the amount of time during which someone or something has lived or existed and the time of life when a person does something or becomes legally able to do something.

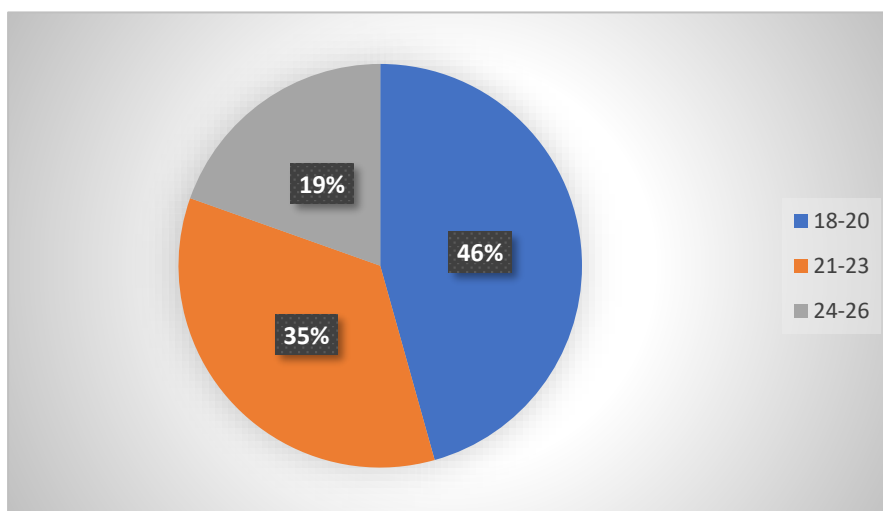

Figure 2. Distribution of the Respondents According to Age.

Figure 1 reveals that 42 or 46% of the respondents are 18-20 years of age, 32 or 35% are 21-23 years of age followed by 18 or 19% are 24-26 years of age. The figure implies that majority of the respondents are in the younger year.

The concept of age is a complex and evolving one, with significant implications for various aspects of life. Dyussenbayev (2017) presents a new age classification, emphasizing the need to consider the physiological and psychological changes that occur throughout life.

Gender

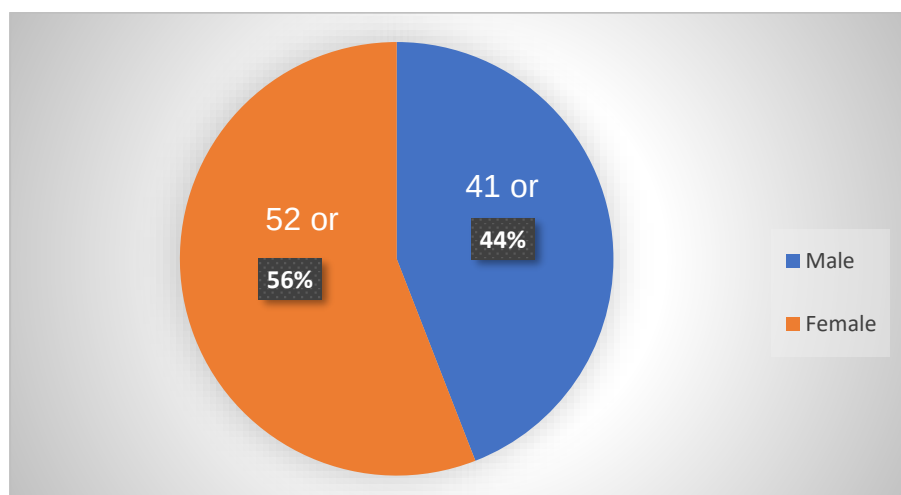

Figure 3. Distributions of the Respondents According to Gender.

These are the roles and responsibilities of men and women and the relationship between them in any work environment. Gender does not simply refer to men and women, but to the way their qualities, behaviours and identities are determined through the process of socialization in the work environment. These roles and responsibilities are culturally specific, can change over time, and can be seen as the social construction of men's and women's roles in any given culture, location or work environment.

As indicated by the figure, majority of the BSOA students are female which are 52 or 56% of the total respondents. On the other hand, 41 or 44% of the respondents are male. Generally, the Bachelor of Science in Office

Administration of the Pamantasan ng Lungsod ng San Pablo are more attached to female than male. Unwalla (2020) further supported this, noting that females tend to have better study habits than males.

Year Level

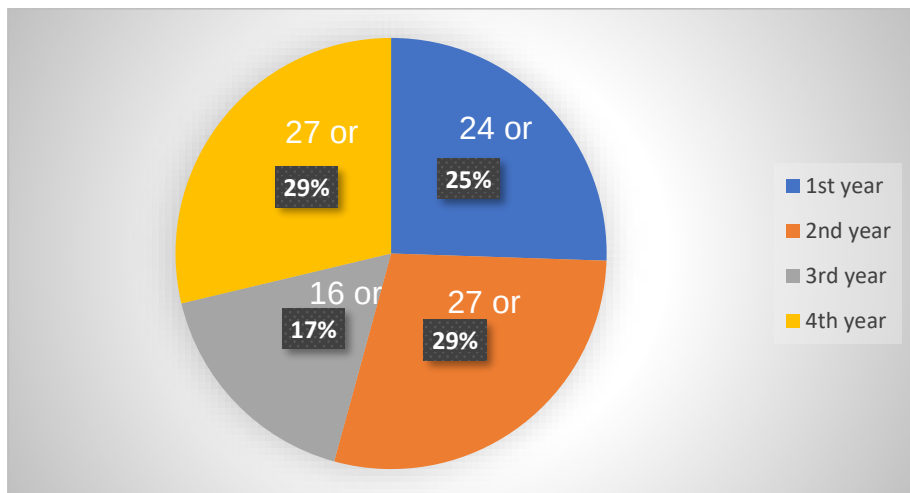

Figure 4. Distributions of the Respondents According to Year Level

Based on the data analyzed, it revealed that most of the most of the respondents are BSOA 2nd year and 4th year comprising of 27 or 29% of the BSOA students; 1st year with 24 or 25%, followed by 3rd year with 16 or 17% of the respondents. This implies that the respondents give value on their year level that shows eagerness and become competitive to develop themselves professionally and to improve their study habits. Expectations of "what college is like" among first-year students are not usually in line with what they really encounter. This study compared the social and academic expectations of twenty-four first-year college students with their experiences at the midpoint and conclusion of their first year. Academic performance in the first year was not statistically significantly predicted by social experiences or expectations or by academic expectations. Nonetheless, first-year grade point averages (GPAs) were lower for pupils with unrealistically high social or academic expectations than for those with medium or below-average expectations. Included are suggestions for enhancing cooperation between high schools and colleges to help students adjust to college life. (Joshua S. Smith)

Part II. Study Habits

Table 2. Perceived Impact of Time Management

Indicators	Mean	SD	Interpretation
1. Effectively prioritize tasks based on their importance and deadlines.	4.14	0.82	Very Satisfactory
2. Resists distractions while studying.	3.88	0.86	Very Satisfactory
3. Proactive in planning ahead for exams, assignments, activities and projects.	3.86	0.83	Very Satisfactory
4. Balance my academic workload with other responsibilities.	3.92	0.74	Very Satisfactory
5. Estimate the time required to complete task accurately.	3.95	0.84	Very Satisfactory
Overall	3.95	0.82	Very Satisfactory

Legend

4.21-5.00	Outstanding	(91-100% of the study habits used by the BSOA students)
3.21-4.20	Very Satisfactory	(81-90% of the study habits used by the BSOA students)
2.61-3.40	Satisfactory	(71-80% of the study habits used by the BSOA students)
1.81-2.60	Unsatisfactory	(61-70% of the study habits used by the BSOA students)
1.00-1.80	Poor	(60 and below of study habits used by the BSOA students)

The Study habits like time management have changed how students learn. They make learning easier and comfortable. Students can learn at their own speed and go back to things they don't understand. These habits have note taking, active participation in class, and quizzes to help students learn better. Because of this, students do better in school and understand things more. So, Study habits help students learn more and do better in their classes.

Students are highly satisfied with the used of different ways of study habits. This positive sentiment is further emphasized by strong scores in all As indicated in table 1 it revealed an overall mean of 3.95 and a standard deviation of 0.82 with a verbal interpretation of "Very Satisfactory" which means that technology has a big impact on student learning outcomes as to Time management strategy.

It also revealed that there are five (5) which obtained the mean of 4.14, down to 3.95 with a standard deviation of 0.82 down to 0.82 also. The results highlighting increased student engagement, academic achievement, and improved understanding of Time management in enhancing learning outcomes.

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

Furthermore, Table 1 shows that the respondents are “Very Satisfactory” that the students “Effectively prioritize tasks based on their importance and deadlines” and “Estimate the time required to complete task accurately.” Their very well satisfactory shows that the respondents give more value to utilizing study habits for educational purposes.

This positive perception indicates a recognition of the value these habits bring to the learning process, facilitating the enhancement of course materials and overall student learning at PLSP.

Table 3. Perceived Impact Learning Strategies

Indicators	Mean	SD	Interpretation
1. Practice applying the information through flashcards or self-test.	4.07	0.81	Very Satisfactory
2. Actively participate in class discussions and activities.	4.14	0.78	Very Satisfactory
3. Find mnemonic techniques helpful for learning complex concepts.	4.28	0.65	Very Satisfactory
4. Visual aids help me understand complex concepts more easily.	3.98	0.80	Very Satisfactory
5. Reviewing notes and materials regularly to retain information over time.	4.27	0.68	Outstanding
Overall	4.15	0.74	Very Satisfactory

Legend:

4.21-5.00	Outstanding	(91-100% of the study habits used by the BSOA students)
3.21-4.20	Very Satisfactory	(81-90% of the study habits used by the BSOA students)
2.61-3.40	Satisfactory	(71-80% of the study habits used by the BSOA students)
1.81-2.60	Unsatisfactory	(61-70% of the study habits used by the BSOA students)
1.001-1.80	Poor	(60 and below of study habits used by the BSOA students)

The learning strategies have a good impact on students. They help students learn better by actively participating in class, higher quizzes scores. These strategies make learning more and easy to understand. Students can study fast and retain information quickly. Technology also helps students do projects and homework more efficiently.

As indicated in table 2, it revealed an overall mean of 4.15 and a standard deviation of 0.74 with a verbal interpretation of “Very Satisfactory”,

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

which means that learning strategies has a significant impact on student learning outcomes, particularly in class participation.

It also revealed that there are five (5) with a mean of 4.07, down to 4.27 with a standard deviation of 0.61 down to 0.68. The results indicate that perceived use of Learning strategies, especially when retaining information, note taking, and different habits that can enhance students' understanding of subjects, encourage independent learning, and foster critical thinking skills.

Furthermore, Table 2 shows that the respondents are "Very Satisfactory" that the students "Help students to compete in class that are relevant to the studies at PLSP" and "Enhance ability of students perceptions." Their very well satisfaction indicates significant value in enhancing their learning and aiding in reviewing any types of material for their own student learning outcomes.

This also implies that the respondents have acknowledged the positive impact of using study habits on student learning outcomes at PLSP concerning learning strategies. This acknowledgment may contribute to increased engagement, motivation, collaboration of educational habits for students.

Table 4. Perceived Impact of Study Environment

Indicators	Mean	SD	Interpretation
1.Peaceful environment helps me to retain and review information effectively.	4.84	0.68	Outstanding
2.An organized study to retain and review information effectively.	4.19	0.45	Very Satisfactory
3.I am able to study without being interrupted by people in my study space.	4.24	0.66	Outstanding
4.Noise level in my study space is conducive to studying.	3.67	0.67	Very Satisfactory
5.Collaborative study environment resulting in improved academic performance.	3.84	0.74	Very Satisfactory
Overall	4.16	0.64	Very Satisfactory

Legend:

4.21-5.00	Outstanding	(91-100% of the study habits used by the BSOA students)
3.21-4.20	Very Satisfactory	(81-90% of the study habits used by the BSOA students)
2.61-3.40	Satisfactory	(71-80% of the study habits used by the BSOA students)
1.81-2.60	Unsatisfactory	(61-70% of the study habits used by the BSOA students)
1.00-1.80	Poor	(60 and below of study habits used by the BSOA students)

PAMANTASAN NG LUNGSOD NG SAN PABLO
Brgy San Jose San Pablo City

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

Table 4 discloses an overall mean of 4.16 and a standard deviation of 0.64 with a verbal interpretation of "Very Satisfactory" which means that study habits have a big impact on students grades as to educational habits.

It also revealed that there are five (5) with the mean of 4.84 down to 3.84 and standard deviations of 0.68 down to 0.64. The results indicate that using different study habits at PLSP can enhance individual learning, improve self-confidence and critical thinking skills.

This also implies that the students in Pamantasan ng Lungsod ng San Pablo gave their full support, cooperation, and involvement in different activities using study habits for academic purposes. It also connotes that the respondents agree with the positive impact of using study habits on student learning outcomes at PLSP regarding educational tools, which may help enhance student engagement, self-efficacy active class participation, act and improved learning outcomes for a more effective educational experience.

Table 5. Perceived Impact of Study Habits on Grades

Indicators	Mean	SD	Interpretation
1.Satisfied with my overall grades/ Gwa this semester.	4.27	0.70	Outstanding
2.My grades reflect the effort effectively that I put into my studies.	4.42	0.62	Outstanding
3. Good grades/GWA motivate me to learn and explore the subjects further.	4.37	0.61	Outstanding
4. Receiving high grades makes me feel confident in my academic abilities.	4.19	0.64	Very Satisfactory
5. Good academic performance (understanding concepts, completing assignments, participating in class) leads me to get a higher grade.	4.28	0.71	Outstanding
Overall	4.61	0.57	Outstanding

Legend:

4.21-5.00	Outstanding	(91-100% of the of the conditions are felt)
3.21-4.20	Very Satisfactory	(81-90% of the of the conditions are felt)
2.61-3.40	Satisfactory	(71-80% of the of the conditions are felt)
1.81-2.60	Unsatisfactory	(61-70% of the of the conditions are felt)
1.00-1.80	Poor	(60 and below of the of the conditions are felt)

PAMANTASAN NG LUNGSOD NG SAN PABLO

Brgy San Jose San Pablo City

OFFICE OF THE VICE PRESIDENT FOR RESEARCH AND INNOVATION

The table above shows positive feedback from the BSOA students regarding the Impact of Study habits on grades. The overall mean score of 4.61, with the interpretation of “Outstanding” which indicates that Study habits had a positive effect on the student’s grades.

Students perceived positive Impact of study habits on their grades as collaborative effort improves their grades with a mean score of 4.27, suggesting that teaching strategies have greatly affects the students grades in a positive way. reflect the effort effectively results in favorable grades with a mean score of 4.42, and receiving high grades with a mean score of 4.19. This likely feel that researching topics ahead of time have high chance of getting good grades with a mean score of 4.55, highlighting their Impact to motivate the students understanding concepts material better with a mean score of 4.28, suggesting that Study habits have great effects on their academic performance.

In conclusion, Table 5 reveals that BSOA students strongly approve of Study habits. This positive feedback suggests that Study habits should be further explored and potentially implemented more extensively within the BSOA program. This endorsement suggests that the current learning strategies are well-aligned with the needs of BSOA students and contribute significantly to their academic success. Additionally, analyzing student grades alongside their perceptions would offer a more objective measure of the impact of Study Habits have on academic performance.

CHAPTER 5

SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

A summary of the findings that emerged from the collected data in this study is presented in this chapter. It also presents the corresponding analysis as well as the interpretation derived from the statistical treatment of the data.

Summary of Findings

This study aimed to analyze and determine “Impact of Study Habits in Academic Performance of BSOA Students in Pamantasan ng Lungsod ng San Pablo”

Specifically, this research sought to answer the following questions: what is the profile of the respondents in terms of the following: age, gender, and section; how do respondents perceive the impact of study habits in terms of the following: time management, learning strategies and study environment; how do the respondents perceive their academic learning outcomes in terms of the following: study habits on grades.

This study employed the descriptive method. The respondents of this study were ninety- four (94) of 1st, 2nd, 3rd, 4th year BS- OFAD students at Pamantasan ng Lungsod ng San Pablo. A survey questionnaire was the main instrument used to gathered the data that distributed to different sections.

The following are the significant findings of the study.

1. Respondents profile reveals that out of ninety – four (94) respondents, age shows that the respondents are 18-20 years of age; majority of the students are female; 52 or 56% of the respondents are affiliated with the BSOA – 4B section.

2. The respondent’s perception the use of technology as to: Reviewing notes and course materials discloses a verbal interpretation of “Outstanding”. On the other hand, Study habits show a verbal interpretation of “Very Satisfactory”.

**OFFICE OF THE VICE PRESIDENT FOR RESEARCH
AND INNOVATION**

2.1 Time management, The overall mean was 3.95 and a standard deviation of .82 with verbal interpretation of "Very Satisfactory".

2.2 Learning Strategies, The overall mean was 4.15 and standard deviation of .74 with verbal interpretation of "Ver Satisfactory" except item 5 which is "Outstanding".

2.3 Study environment, the overall mean was 4.16 and a standard deviation of .64 with verbal interpretation of "Very Satisfactory"

3. The respondent's perception on academic performance as to; Students Grades revealed an overall mean of 4.61 and a standard deviation of 0.57 with a verbal interpretation of "Outstanding". On the other hand, Time management and learning strategies shows a verbal interpretation of "Very Satisfactory".

Conclusions

The hypothesis states that there is no negative feedback on our findings according to our survey. Based on our gathered data there is no negative impact of study habits of PLSP BSOA students' academic performance. The skills that they mostly like to develop through study habits was priotize the task, meet the deadline, mnemonic techniques helpful for learning complex concepts, reviewing notes and materials regularly to retain information over time and Peaceful environment helps me to retain and review information effectively. When it comes to grades, students well achieve and perceive their academic performance. Therefore, hypothesis is partially accepted.

Recommendations

Based on the summary of findings and conclusion drawn, the following recommendation is hereby offered:

1. It would be worthwhile for all stake holders in education parents, teachers to encourage students in their perspective area of

PAMANTASAN NG LUNGSOD NG SAN PABLO

Brgy San Jose San Pablo City

OFFICE OF THE VICE PRESIDENT FOR RESEARCH AND INNOVATION

responsibilities such as providing Study materials, conducive place of study, appreciating students hard work as soon as possible among others, these will help students positively towards their study and academic achievement.

2. As an inhabitation has been found to be a significant factor in academic achievement and developing study habits among students.
3. Parents should improved the level of control and care of their children show more interest and concern in the academic work of their wards by way of providing conducive atmosphere for studies, providing materials for studies and helping students in their studies.
4. Study habits are important as they influence the academic performance of students so parent and teachers must help in improving the study habits of students. Study habits are characteristically used by students when left to work themselves with little or no direction hence, teachers in schools should be facilitators of learning. The finite treasure within every learner should be discovered and nurtured for the purpose of improving effective study skills.
